RM UG TRAINING DAYS 2021

SORA's Tip #8

Make sure to enforce the principle of least privilege in your database.

@SwissOUC Source: https://twitter.com/swissOUC/status/1334440993572052994/photo/1

RM UG TRAINING DAYS 2021

Agenda

- Introduction
- Package DBMS_PRIVILEGE_CAPTURE & Data Dictionary Objects
- Workflow
- Evaluation of the results and adopting the privileges
- Summary & Further Information

Introduction

History

- Security simply wasn't a focus for many legacy applications
- Many applications run with DBA-like privileges
- No privilege specification or analysis was performed at design time
- Focus was on getting the application running versus least privilege

SQL> grant DBA to PUBLIC with admin option; Grant succeeded.

Principle of the Least Privilege

"Every program and every privileged user of the system should operate using the least amount of privilege necessary to complete the job."

Jerome Salzer, Communications of the ACM, 1974

Oracle 12c introduced Privilege Analysis

- Captures the privileges which are used by an application resp. a database user
- Reports the used privileges (and the way ("path") the privileges have been granted)
- Reports the privileges which have been granted but have not be used
- Helps you to achieve the "Least Privilege Principle" for your own database applications

Oracle 12c Licensing

• There was this small note in the "Oracle Database Licensing Information":

Feature / Option /				DBCS	DBCS	DBCS	DBCS		
Pack	SE2	EE	EE-ES	SE	EE	EE-HP	EE-EP	ExaCS	Notes
Privilege Analysis	Ν	Y	Y	Ν	N	Y	Y	Y (EE and EE-ES : Requires the Oracle Database Vault option

November 2018: Licensing changed

407	1.
(FT IS	÷
10.78	
100	7

Pete Finnigan @petefinnigan 20 Nov 2018 Oracle has just made the privilege analysis feature of Database Vault free for EE database licenses in 18c and also retrospectively for all 12c. See my blog post about the same here: #oracle #security #datasecurity #databasevault Inkd.in/eaf5GpR

Feature / Option / Pack	SE2	EE	EE-ES	DBCS SE	DBCS EE	DBCS EE- HP	DBCS EE- EP	ExaCS	Notes
Privilege Analysis	Ν	Y	Y	N	Y	Υ	Y	Y	

 Privilege Analysis is now available for Oracle Database Enterprise Edition (for all versions since Oracle Database 12c Release 1),
 Database Vault is not required anymore

Of course, it's not that easy ..

- Logging database usage is a kind of auditing
 - Especially when using personalized accounts
 - Oracle Privilege Analysis captures which privileges were used but not the exact time when they were used (you can only determine the time range = time when the analysis ran)
 - You may be required to ask the workers council for an approval
 - But security is a strong argument
- Expect resistance
 - From 3rd party software vendors
 - From your own developers

RM®UG TRAINING DAYS 2021

.. but it will help you as the DBA

- Required privileges will be documented
- High privileges which are not used (resp. required) are documented
- Raise security concerns, tell your manager
 - Then (s)he's in charge

irivadis

Package DBMS_PRIVILEGE_CAPTURE & Data Dictionary Objects

RM UG TRAINING DAYS 2021

Package DBMS_PRIVILEGE_CAPTURE

Procedure	Purpose
CREATE_CAPTURE	Defines a capture policy
ENABLE_CAPTURE	Starts a privilege capture run
DISABLE_CAPTURE	Ends a privilege capture run
GENERATE_RESULT	Fills the result views with the results of a capture run
DROP_CAPTURE	Drops a capture policy and the associated results
DELETE_RUN	Deletes the results of a capture run (but not the policy)
CAPTURE_DEPENDENCY_PRIVS	Captures the privileges that are used by definer's rights and invoker's rights PL/SQL program units for compilation (has to be enabled manually after a capture was started)

RM® UG TRAINING DAYS 2021

Data Dictionary Views & Internal

Name	Purpose / Content
DBA_PRIV_CAPTURES	defined capture policies and runs (via "DBMS_PRIVILEGE_CAPTURE.CREATE_CAPTURE")
PRIV_CAPTURE\$	(source of DBA_PRIV_CAPTURES)
CAPTURED_PRIV\$	Captured privileges (*)
CAPTURE_RUN_LOG\$	Information on the capture runs (*) Contains information on start time and end time (which is not visible in the DBA_%-views)

• (*) Both result tables are located in the SYSAUX tablespace

Result Views (1)

Views for used privileges	Views for unused privileges			
Overview (all privileges resp. grants)				
DBA_USED_PRIVS	DBA_UNUSED_PRIVS			
	DBA_UNUSED_GRANTS			
Privileges granted to Public				
DBA_USED_PUBPRIVS	DBA_UNUSED_PUBPRIVS			
Sy	vstem Privileges			
DBA_USED_SYSPRIVS	DBA_UNUSED_SYSPRIVS			
DBA_USED_SYSPRIVS_PATH	DBA_UNUSED_SYSPRIVS_PATH			

RM®UG TRAINING DAYS 2021

Result Views (2)

Views for used privileges	Views for unused privileges			
Object Privileges				
DBA_USED_OBJPRIVS	DBA_UNUSED_OBJPRIVS			
DBA_USED_OBJPRIVS_PATH	DBA_UNUSED_OBJPRIVS_PATH			
User Privileges				
DBA_USED_USERPRIVS	DBA_UNUSED_USERPRIVS			
DBA_USED_USERPRIVS_PATH	DBA_UNUSED_USERPRIVS_PATH			

Workflow

Define Capture Policy (1) – What to capture?

- You should know how to identify the application in the database, e.g.
 - Specific user
 - Role(s) granted to the user which is used by the application
 - Session context
- Based on that information you can define the capture policy

Define Capture Policy (2) – Capture Types

- Possible capture types
 - All database activities
 - Validate role privileges by capturing all privileges which are included in a role or a set of roles
 - Database sessions which fullfill certain context conditions (function SYS_CONTEXT)

Define Capture Policy (3) – Capture Types

• Constants in DBMS_PRIVILEGE_CAPTURE (for capture type):

G_DATABASE	capture all database activities (resp. used privileges) except for SYS activities
G_ROLE	captures privilege use of one ore more roles
G_CONTEXT	captures all privilege use in a specified context
G_ROLE_AND_CONTEXT	combination of G_ROLE and G_CONTEXT

Define Capture Policy (4) – CREATE_CAPTURE

Procedure DBMS PRIVILEGE CAPTURE.CREATE CAPTURE

Argument Name	Туре	In/Out	Default?
NAME	VARCHAR2	IN	
DESCRIPTION	VARCHAR2	IN	DEFAULT
TYPE	NUMBER	IN	DEFAULT
ROLES	ROLE_NAME_LIST	IN	DEFAULT
CONDITION	VARCHAR2	IN	DEFAULT

 "CONDITION" has to be used to define the context for the capture types "G_CONTEXT" and "G_ROLE_AND_CONTEXT"

Define Capture Policy (5) - Examples

REM policy to capture all database activities

```
execute DBMS_PRIVILEGE_CAPTURE.CREATE_CAPTURE(
   name => 'POLICY_ALL_DB_ACTIVITIES',
   description =>'captures all database privileges used by all users',
   type => DBMS_PRIVILEGE_CAPTURE.G_DATABASE
   );
```

```
REM which PUBLIC privileges are used by an application/user
execute DBMS_PRIVILEGE_CAPTURE.CREATE_CAPTURE(
    name => 'POLICY_CAPTURE_PUBLIC',
    description =>'captures all required privileges granted to public',
    type => DBMS_PRIVILEGE_CAPTURE.G_ROLE,
    roles => 'PUBLIC'
  );
```

Define Capture Policy (6) - Examples

REM which privileges are used by a specific user

```
execute DBMS_PRIVILEGE_CAPTURE.CREATE_CAPTURE(
   name => 'POLICY_CAPTURE_SCOTT',
   description =>'captures the privileges required by SCOTT',
   type => DBMS_PRIVILEGE_CAPTURE.G_CONTEXT,
   condition=> q'[sys_context('USERENV','SESSION_USER') = 'SCOTT']'
);
```

```
REM which DBA privileges are used by a specific user
execute DBMS_PRIVILEGE_CAPTURE.CREATE_CAPTURE(
    name => 'POLICY_CAPTURE_SCOTT_DBA',
    description =>'captures all required privileges granted to public',
    type => DBMS_PRIVILEGE_CAPTURE.G_ROLE_AND_CONTEXT,
    roles => 'DBA',
    condition=> q'[sys_context('USERENV','SESSION_USER') = 'SCOTT']'
```

RM®UG TRAINING DAYS 2021

Define Capture Policy (7) - SYS_CONTEXT

- SYS_CONTEXT is the only function which can be used to specify the conditions for "DBMS_PRIVILEGE_CAPTURE.G_CONTEXT"
- No user defined functions (but you can use a user defined context)

•	• Examples:	SESSION_USER	User who logged in
		HOST	Client machine
		OS_USER	Client OS User
		MODULE	via DBMS_APPLICATION_INFO
		ACTION	via DBMS_APPLICATION_INFO
		User defined context	via DBMS_SESSSION.SET_CONTEXT

Start Privilege Capture

PROCEDURE DBMS PRIVILEGE CAPTURE.ENABLE CAPTURE

Argument Name	Туре	In/Out	Default?
NAME	VARCHAR2	IN	
RUN_NAME	VARCHAR2	IN	DEFAULT

- For one profile multiple test runs can be stored
- Enable capture of dependency privileges if required
- Example for starting a privilege capture

```
Execute DBMS_PRIVILEGE_CAPTURE.ENABLE_CAPTURE(
   name => 'POLICY_CAPTURE_SCOTT',
   run name => 'TEST RUN 20191110');
```

Run your Application

• That's the critical part

- You have to run all modules, screens, batch jobs etc. which are ever used by your application
- Hopefully, you have got a complete (!) set of automated (!) tests
- Missing a function which runs e.g. once a year and which requires a special privilege will cause this function to fail (some time later) if you adopt the privileges according to the results of the privilege capture!

RM®UG TRAINING DAYS 2021

Stop Privilege Capture

• After the tests are complete the capture can be stopped

PROCEDURE DBMS	PRIVILEGE_CAPTURE.DISABLE_	CAPTURE
Argument Name	Туре	In/Out Default?
NAME	VARCHAR2	IN

• Example:

```
Execute DBMS_PRIVILEGE_CAPTURE.DISABLE_CAPTURE(
    name => 'POLICY CAPTURE SCOTT');
```

Fill Result Views (1)

 The results which are stored in internal tables after the run has been stopped have to transferred into the DBA_USED_%- and DBA_UNUSED_%-views

PROCEDURE DBMS PRIVILEGE CAPTURE.GENERATE RESULT

Argument Name	rgument Name Type		In/Out Default?	
NAME	VARCHAR2	IN		
RUN_NAME	VARCHAR2	IN	DEFAULT	
DEPENDENCY	BOOLEAN	IN	DEFAULT	

 Setting DEPENDENCY=TRUE is required when capturing dependent privileges (CAPTURE_DEPENDENCY_PRIVS)

Fill Result Views (2)

• Example:

```
Execute DBMS_PRIVILEGE_CAPTURE.GENERATE_RESULT (
   name => 'POLICY_CAPTURE_SCOTT',
   run_name => 'TEST_RUN_20191110');
```

- The run_name must be the same as the one you specified when you enabled the capture
- If you do not specify the run_name, the capture will be stopped but the column "RUN_NAME" in the result table will be empty.

Privilege Analysis for Pre-Compiled DB Objects

- Packages, procedures, functions, triggers, JAVA classes etc. ("pre-compiled database objects") may require additional privileges which are not executed during a privilege capture
- These privileges can be captured during a database-wide privilege analysis
- Used privileges are captured in the (internal) policy ORA\$DEPENDENCY
 - → Query both policies (ORA\$DEPENDENCY and your own defined policy) to retrieve all required privileges

Miscellaneous (1)

- The role CAPTURE_ADMIN is required to run procedures of the package DBMS_PRIVILEGE_CAPTURE
- Only one non-database-wide privilege capture policy (based on role and/or context) can be active at a time
 - But a database-wide privilege analysis policy can be enabled in parallel
- Enabled capture policies remain active even after a restart of the database instance
 - − But the privileges which were captured before the restart are lost ⊗

Miscellaneous (2)

- Results are stored until the run is deleted (DBMS_PRIVILEGE_CAPTURE.DELETE_RUN) or the policy is dropped (DBMS_PRIVILEGE_CAPTURE.DROP_POLICY)
 - Create your own result tables via CTAS to avoid the loss of data
- In a Container Database you can run privilege analysis on container level only (CDB\$ROOT and individual PDBs), not globally for all containers
- The performance impact of privilege capture can be neglected (at least according to my experience)

Miscellaneous (3)

- If you consider the required space in tablespace SYSAUX as an issue, the following workflow may be an option
- Run DBMS_PRIVILEGE_CAPTURE on a daily basis (e.g. via database job)
 - 1. disable_capture ('policy','current_run')
 - 2. Generate result ('policy','current_run')
 - Insert into own_table select * from dba_used/unused where run_name='current_run'
 - 4. Delete_run ('policy','current_run')
 - 5. enable capture ('policy','next_run')

Miscellaneous (4)

- Of course, there's the risk that special privileges which are used in the short interval between disabling / enabling the policy are not captured
- The same procedure may help preventing loss of capture data due to a restart of an instance.

Miscellaneous (5)

- When using objects from another schema for own objects, e.g. views or PL/SQL code, granting privileges via a role is not sufficient: Direct grants are required
- Assuming a user has been granted a privilege both via role and directly and a direct grant is required, this will be reflected in DBA_USED_PRIVS (USERNAME=USED_ROLE)

Miscellaneous (6)

SELECT run_name, object_owner, object_name, username, used_role
FROM dba_used_privs WHERE object_owner = 'HR';

RUN_NAME	<pre> OBJECT_OWNER </pre>	OBJECT_NAME	🚯 USERNAME	USED_ROLE		Direct grant was required for creating a view
C_DIRECTVIEW	HR	EMPLOYEES	PAUSER	PAUSER		
A_ROLEONLY	HR	EMPLOYEES	PAUSER	PAUSER_ROLE	\prec	SELECT only, role grant
					l	was sufficient

When granting privileges (after the analysis), joining the results with DBA_DEPENDENCIES may be beneficial, too.
 → direct grants to dependent objects may be required

Evaluating the results & Adopting the privileges

 Unfortunately there are no procedures etc. from Oracle which help to evaluate th results and to scripts for revoking resp. granting the privileges resulting from the analysis

Example Result Queries (1)

- Which system privileges were used and how were they granted? ("grant path")
- SQL> select USED_ROLE, SYS_PRIV, PATH
 - 2 from DBA_USED_SYSPRIVS_PATH where CAPTURE='POLICY_CAPTURE_SCOTT'
 - 3 and RUN_NAME= 'TEST_RUN_20191110';

USED_ROLE	SYS_PRIV	PATH	
TOP_SECRET	SELECT ANY TABLE SELECT ANY TABLE ANALYZE ANY CREATE SESSION	GRANT_PATE	I('SCOTT') I('SCOTT', 'SECRET', 'TOP_SECRET') I('SCOTT', 'SECRET', 'TOP_SECRET') I('SCOTT', 'CONNECT')
	The privilege "SELEC TABLE" was granted in		Role TOP_SECRET was granted to the role SECRET and the role SECRET was granted to SCOTT
RM [®] UG	TRAINING DAY	'S 2021	Reach for the Summit February 8-

Example Result Queries (2)

- Which object privileges were used?
- SQL> select USERNAME, USED_ROLE, OBJ_PRIV,
 - 2 OBJECT OWNER O OWNER, OBJECT TYPE O TYPE, OBJECT NAME O NAME
 - 3 from DBA USED OBJPRIVS
 - 4 where CAPTURE='POLICY CAPTURE SCOTT'
 - 5 and RUN_NAME= 'TEST_RUN_20191110';

USERNAME	USED_ROLE	OBJ_PRIV	O_OWNER	C_TYPE	O_NAME
SCOTT	PUBLIC	EXECUTE	SYS	PACKAGE	DBMS_APPLICATION_INFO
SCOTT	PUBLIC	SELECT	SYS	TABLE	DUAL
SCOTT	SCOTT	SELECT	HR	TABLE	DEPARTMENTS
SCOTT	SCOTT	SELECT	HR	TABLE	EMPLOYEES
SCOTT	SCOTT	UPDATE	HR	TABLE	EMPLOYEES

RM UG TRAINING DAYS 2021

Example Result Queries (3)

• All privileges which were used during the privilege analysis capture

SQL> select OBJ_PRIV,SYS_PRIV,OBJECT_OWNER O_OWNER,

- 2 OBJECT_NAME O_NAME, OBJECT_TYPE O_TYPE from DBA_USED_PRIVS
- 3 where CAPTURE='POLICY_CAPTURE_SCOTT' and RUN_NAME= 'TEST_RUN_20191110';

OBJ_PRIV	SYS_PRIV _	O_OWNER	O_TYPE	O_NAME
UPDATE		HR	TABLE	EMPLOYEES
	SELECT ANY TABLE	HR	TABLE	EMPLOYEES
	SELECT ANY TABLE	HR	TABLE	EMPLOYEES
SELECT		HR	TABLE	DEPARTMENTS
	ANALYZE ANY	HR	TABLE	EMPLOYEES
SELECT		SYS	TABLE	DUAL
SELECT		HR	TABLE	EMPLOYEES
	CREATE SESSION			
EXECUTE		SYS	PACKAGE	DBMS APPLICATION INFO
RM®UG	TRAINING DAY	S 2021		Reach for the Summit February 8–11

Example Result Queries (4)

 All privileges which were granted to the to the user SCOTT but not used during the privilege analysis capture

SQL> select OBJ PRIV, SYS PRIV, OBJECT OWNER O OWNER, OBJECT_NAME O_NAME, OBJECT_TYPE O_TYPE from DBA_UNUSED_PRIVS where CAPTURE='POLICY CAPTURE SCOTT' and RUN NAME= 'TEST RUN 20191110'; O OWNER O TYPE O NAME OBJ_PRIV SYS_PRIV SELECT ANY DICTIONARY EXECUTE SYS DIRECTORY DATA PUMP DIR DIRECTORY DATA PUMP DIR READ SYS DIRECTORY DATA PUMP DIR WRITE SYS V \$SQL PLAN STATISTICS ALL SELECT SYS VIEW V \$SESSION SELECT SYS VIEW V \$SQL PLAN SELECT SYS VIEW V \$SQL SELECT SYS VIEW EXECUTE SYS PACKAGE DBMS FLASHBACK ARCHIVE [..]

RM®UG TRAINING DAYS 2021

Example Result Queries (5)

• The views contain much more information

SQL> desc DBA USED PRIVS

Name	Null? Type
CAPTURE	NOT NULL VARCHAR2 (128)

Generate "GRANT" commands (1)

- The results of a privilege capture can be used to create a GRANT-script
- Example: GRANT all required privileges to a new role SCOTT_ROLE
- Part 1: System Privileges

SQL> SELECT 'grant '||sys_priv||' to SCOTT_ROLE;' PRIVS_TO_GRANT

- 2 FROM DBA_USED_PRIVS where SYS_PRIV not like '%ANY%'
- 3 and CAPTURE='POLICY CAPTURE SCOTT'
- 4 and RUN_NAME= 'TEST_RUN_20191110';

Generate "GRANT" commands (2)

• Part 2. Object Privileges

SQL>	SELECT DISTINCT 'grant '
2	CASE SYS_PRIV
3	WHEN 'SELECT ANY TABLE' THEN 'SELECT'
4	WHEN 'EXECUTE ANY PROCEDURE'THEN 'EXECUTE'
5	WHEN 'INSERT ANY TABLE' THEN 'INSERT'
6	WHEN 'UPDATE ANY TABLE' THEN 'UPDATE'
7	WHEN 'DELETE ANY TABLE' THEN 'DELETE'
8	WHEN 'ANALYZE ANY' THEN 'ANALYZE'
9	WHEN 'SELECT ANY SEQUENCE ' THEN 'SELECT'
10	ELSE
11	OBJ_PRIV
12	END
13	' on ' OBJECT_OWNER '.' OBJECT_NAME ' to SCOTT_ROLE;' PRIVS_TO_GRANT
14	FROM DBA_USED_PRIVS where object_name is not null;

Query originally based on <u>https://apex.oracle.com/pls/apex/germancommunities/dbacommunity/tipp/7141/index.html</u> Credits to Norman Sibbing from Oracle

RM®UG TRAINING DAYS 2021

Generate "GRANT" commands (3) - Result

grant CREATE SESSION to SCOTT RESTRICTED PRIVS ROLE;

grant EXECUTE on SYS.DBMS_APPLICATION_INFO to SCOTT_RESTRICTED_PRIVS_ROLE; grant SELECT on HR.EMPLOYEES to SCOTT_RESTRICTED_PRIVS_ROLE; grant SELECT on HR.EMP_TEST2 to SCOTT_RESTRICTED_PRIVS_ROLE; grant SELECT on HR.DEPARTMENTS to SCOTT_RESTRICTED_PRIVS_ROLE; grant ANALYZE on HR.EMPLOYEES to SCOTT_RESTRICTED_PRIVS_ROLE; grant UPDATE on HR.EMP_TEST2 to SCOTT_RESTRICTED_PRIVS_ROLE; grant SELECT on SYS.DUAL to SCOTT_RESTRICTED_PRIVS_ROLE;

Summary & Further Information

Summary

- "Privilege Analysis" is a great tool for achieving the "Principle of the Least Privilege"
- You should include Privilege Analysis in your tests
- It's critical that you run all functions, modules, batch jobs etc. of your application during the capture phase (Automation can help ^(C))
- Lifting the license restrictions (Database Vault) was an important step made by Oracle to help the customers making their applications more secure
